

Enrollment No. : 2302030430071

Assignment : 1

[Ans 1 :]

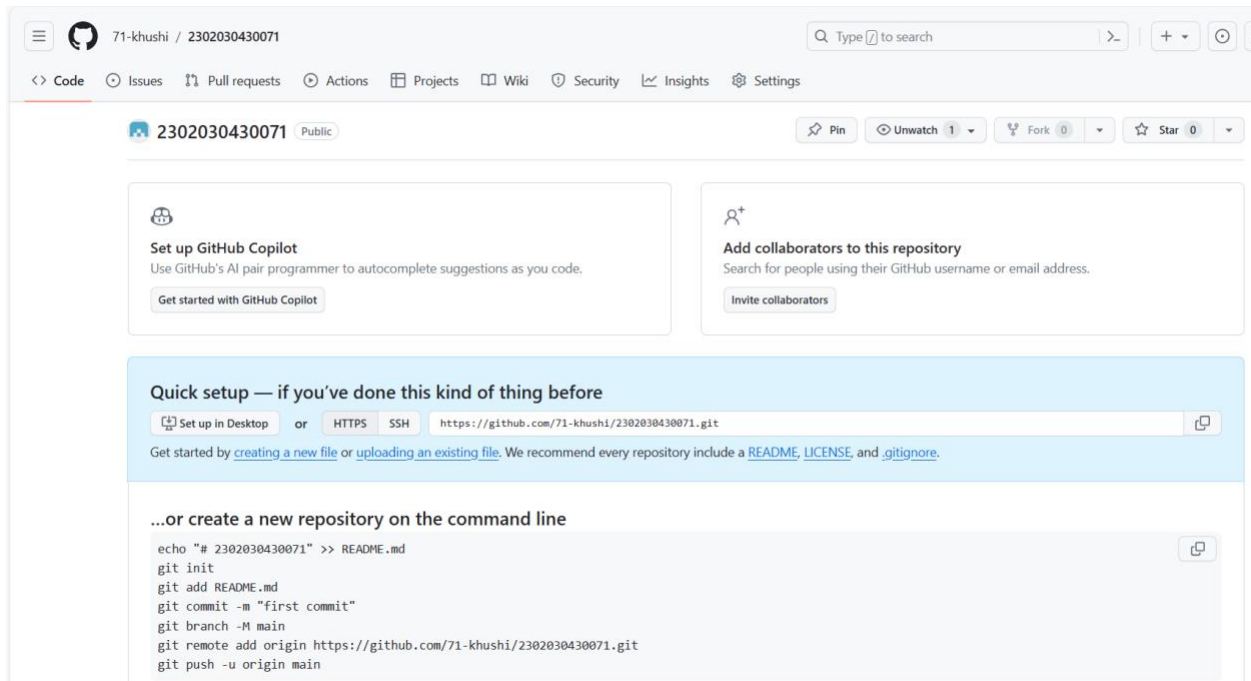

Step 1: click on the “New” button to create a new repository.

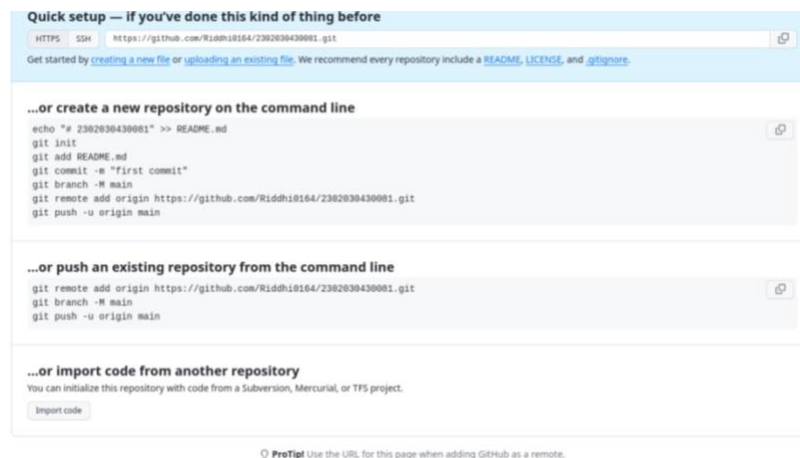

Step 2 : Give the name of the repository. Make it public or private by clicking on the given options. Add a README file if you want to. After that click on the “Create repository” button.

A screenshot of the GitHub 'Create a new repository' form. The header shows a hamburger menu, the GitHub logo, and the text 'New repository'. A search bar is on the right. The main heading is 'Create a new repository', followed by a subtext: 'A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)'. Below this, a note states 'Required fields are marked with an asterisk (*)'. The form has two main sections: 'Owner *' with a dropdown menu showing '71-khushi' and 'Repository name *' with a text input field containing '2302030430071'. A green checkmark and text below the name field state '2302030430071 is available.'. A tip suggests 'Great repository names are short and memorable. Need inspiration? How about [miniature-funicular](#) ?'. The 'Description (optional)' section has a text input field. The 'Visibility' section has two radio buttons: 'Public' (selected) with the description 'Anyone on the internet can see this repository. You choose who can commit.' and 'Private' with the description 'You choose who can see and commit to this repository.'. The 'Initialize this repository with:' section has a checkbox for 'Add a README file' with the subtext 'This is where you can write a long description for your project. [Learn more about READMEs.](#)'. The 'Add .gitignore' section has a dropdown menu for '.gitignore template:' set to 'None'. At the bottom, it says 'Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)'.

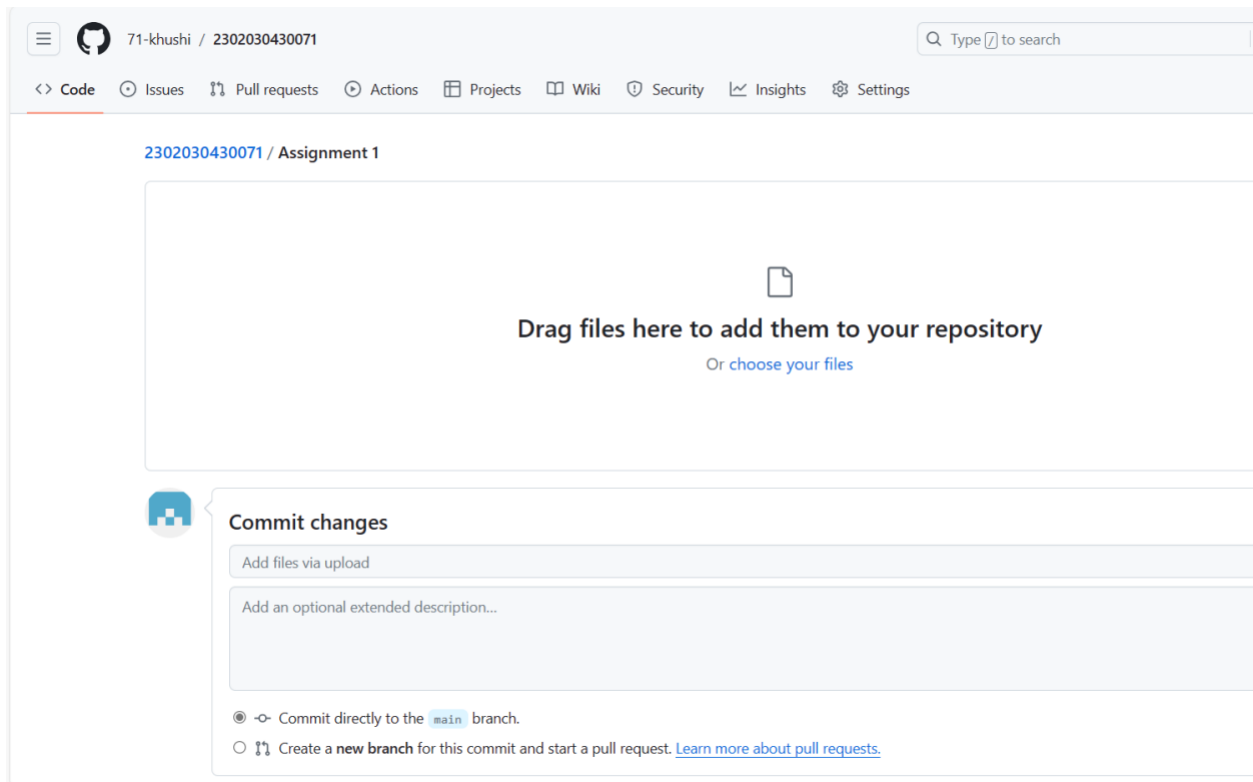

Like that, your GitHub repository has been created successfully.

Step 3 : Scroll down and you will see the option for importing code.

Click on “uploading an existing file” and you can start importing the code files and folders to your REPO or follow the commands and execute them.

Or you can Click on “choose files” then select files or folders and upload them.
